PROFESSIONAL SUMMARY

Software Engineer with 4+ years of professional experience in software development specially in backend, API engineering, business analysis, Finthech, database management, and system integration. Experienced in building and maintaining server-side applications using go, gin, Node.js, Express.js, Python, Flask, Fast API, PostgreSQL, MongoDB, and MySQL. Background includes fintech transaction processing, transaction validation, fraud detection workflows, internal business systems, and workflow automation. Familiar with containerization, CI/CD tooling, distributed messaging, cloud infrastructure, and scalable backend architecture. Strong problem-solving, technical documentation, cross-functional collaboration, and mentoring skills, with a focus on building secure, maintainable, and reliable software systems.

PROFESSIONAL EXPERIENCE

Senior Backend Engineer

Apr 2024 – Present

Eaglelion Systems Solutions • Onsite

- Develop and maintain backend services and automation solutions for fintech and entertainment clients.
- Implement transaction validation and fraud detection workflows to improve processing accuracy, operational efficiency, and transaction reliability.
- Design and develop content scheduling tools that streamline content management and support entertainment and streaming workflows.
- Build backend solutions designed to accommodate high transaction volumes and large media assets.
- Collaborate with cross-functional teams to translate business requirements into technical specifications and maintainable backend implementations.
- Support application deployment, troubleshooting, maintenance, and continuous improvement based on user and operational feedback.
- Contribute to technical problem-solving and mentor junior team members to encourage code quality, collaboration, and consistent engineering practices.

Automation Engineer

Oct 2023 – Apr 2024

Bruhati IT Solutions • Remote

- Designed and developed business process automation solutions to reduce manual work and improve operational efficiency.
- Translated business requirements into scalable, maintainable automation workflows tailored to internal operational needs.
- Identified workflow bottlenecks and implemented solutions to improve process consistency and reduce manual errors.
- Managed assigned tasks independently while coordinating with distributed team members to maintain project progress and meet deadlines.
- Prepared technical documentation and communicated implementation progress, technical challenges, and proposed solutions.
- Participated in remote team meetings, technical reviews, and collaborative problem-solving activities.

Backend Developer Oct 2022 – Apr 2024

Dan Energy Ltd. • Onsite

- Developed and maintained internal backend systems supporting employee management, reporting automation, and business operations.
- Implemented backend functionality to support operational workflows and improve access to internal business information.
- Collaborated with system designers and frontend developers to integrate backend services with application interfaces and business requirements.
- Provided implementation and deployment support, troubleshooting technical issues and helping resolve integration challenges.
- Maintained and enhanced existing backend services in response to internal stakeholder feedback and evolving business requirements.
- Assisted with onboarding junior developers by sharing code guidance, development practices, and technical knowledge.

EDUCATION

Bahir Dar University 2022
Electrical Engineering

TECHNICAL SKILLS

Go, JavaScript, Python, Node.js, SQL, Problem Solving, Data Structures, Agile Methodologies, Algorithms, Debugging, Java

Backend Frameworks
Gin, Fast API, Express.js, Flask

Databases
PostgreSQL, MongoDB, MySQL, Redis, immudb

API Development
RESTful APIs, API Integration, JSON, Request/Response Design, Backend Service Integration

DevOps and CI/CD
Docker, Git, Jenkins, Kubernetes

Messaging and Distributed Systems
Apache Kafka, Event-Driven Architecture Fundamentals

Cloud Infrastructure
Amazon Web Services (AWS)

Backend Engineering
Database Design, Transaction Processing, Business Process Automation, System Integration, Application Maintenance, 3rd Party Integration, Performance Optimization, Error Handling

Professional Skills
Analytical Thinking, Problem-Solving, Technical Documentation, Team Collaboration, Task Management, Ownership, Mentoring, Continuous Learning

SELECTED TECHNICAL PROJECTS AND ARCHITECTURE WORK

Present

YENE Education Operating System

Fintech and Digital Transaction Systems Backend Engineering and System Design

- Work on backend engineering concepts for transaction-oriented applications, emphasizing reliable API communication, database operations, and secure service integration.
- Explore scalable service architecture using PostgreSQL, Redis, Docker, and Kafka for data management, caching, containerization, and asynchronous messaging.

- Focus on production-oriented practices, including service separation, configuration management, health checks, and maintainable API design. Technologies and concepts: Go, Gin, Node.js, Express.js, PostgreSQL, Redis, Docker, Kafka, REST APIs.

Awards

Certificate of Contribution – Dashen Super App

Recognized for contributions to the development and/or delivery of the Dashen Super App.

KEY ACHIEVEMENTS

- Large-Scale Fintech Impact: Contributed to the Dashen Super App, a digital financial platform that surpassed ETB 500 billion in transaction volume.
